

RODYX CD60

Production Description:

This kind of capacitors are developed and researched according to standard of American Electronics Association (ANSI/EIA-463). The external case of the capacitor is made of bakelite plasticized that its characteristics are not only good insulating resistance and strong resistance to damage but also protecting electro-liquid as a good sealed feature. It is popularly used for the super AC application as good life, higher degree of reliability and stability.

Usage:

The motor start capacitor is a range of AC electrolytic capacitors. These capacitors are most often used to provide the torque necessary to start AC motors and in other intermittent AC applications.

Features:

Tow 25" .6.35mm. Quick connect terminals

Round moisture and oil resistant plastic case

Quick disconnect terminals

Recessed terminals

Long life and high reliability

Main Technical Parameter

Rated Capacitance:	21-1280mfd
Rated Capacitance:	0-±20%
Rated Alternate Voltage:	110v-330v
Rated frequency:	50/60Hz
Working Temperature Range:	-10~+60℃
Dissipation Factor:	Tan δ ≤ 0.2 (100Hz, 20℃)
Without Voltage Between Terminal:	Apply 1.25 times working voltage for 2S Without break down or explosion
Withstand voltage Between Terminal And case:	2000VAC for 10 seconds without break down or explosion
