ZTH Ceramic Resonator

Scope

This specification shall cover the characteristics of the ceramic resonator with 190 to 1250 KHz for the clock oscillation.

The ZTH ceramic resonator is the miniature low profile frequency control products of low frequency 190 to 1250 KHz. It is of very competitive price than quartz crystal parts and of high stability that make of substitute the quartz crystal when need lower price.

Temperature Cycling		
	Subject the resonator to -20±5°C for 30 min. followed by a high temperature of 80°C for 30 min. Cycling shall be repeated 5 times with a transfer time of 15 min. at the room condition. Then release the resonator into the room temperature for 1 hour prior to the measurement.	It shall fulfill the specifications in Table-1
Vibration		
	Subject the resonator to vibration for 2 hours each in x, y and z axis with the amplitude of 1.5mm, the frequency shall be varied uniformly between the limits of 10 to 55Hz.	It shall fulfill the specifications in Table-1
Mechanical Shock		
	Drop the resonator randomly onto a concrete floor from the height of 70cm, 3 times	It shall fulfill the specifications in Table-1
